City Launches New Registration Software Program
Residents may now register for programs and reserve a park shelter online

PLEASANT HILL, Iowa – The City of Pleasant Hill has launched a new online registration module to make it easier and for residents and City staff to register for Parks & Recreation programs and reserve a park shelter. SportsMan SQL is user-friendly software program that provides ease of use for residents and supports staff with reporting of results.

“This module compliments the ongoing efforts to provide residents accessibility to register at their leisure while increasing the number of programs offered for children and adults,” said Rick Courcier Recreation Manager. “Analyzing data and reporting findings will enable us to offer programs and events that interest citizens of all ages within our community. We have terrific parks and trails within the city, but we too want residents to have ample recreational opportunities. We are confident participation in programs and classes will increase because this program provides a fast and easy way to sign up while providing residents ease of use for registration and payment.”

For those that do not have access to a computer, registration and reservations can still be done at City Hall.

This module was successfully implemented because of a Facebook Community Action Grant. For more information about upcoming programs, events or to register, visit pleasanthilliowa.org/registration.
